Most of the time, when I want to change a keystroke, I end up doing it the long and tedious way. In this case, I have to open up the same document over and over again and try to find the right button to change. That's just ridiculous, so I created KeyMacro. KeyMacro is a new way to quickly change hot keys, mouse bindings and other keyboard shortcuts in Microsoft Word, Excel, PowerPoint and

other software. You can change your shortcuts with the click of a button or the press of a key. KeyMacro has an easy to use interface and works just like a traditional keyboard shortcut. KeyMacro Features: ⏺ Mouse bindings - change your mouse bindings in any mouse and Windows software. ⏺ Hot Keys - Change your keyboard shortcut with the click of a button. ⏺ Hotkeys on keyboard

- change your keyboard hot keys with the click of a button. ⏷ Mouse - change your mouse's keyboard shortcuts with the click of a button. ⏷ Setting manager - change your keyboard shortcuts settings with the click of a button. ⏷ Folder or shortcut to jump to - change the shortcut and move through your files with the click of a button. ⏷ Multi-platform compatible - use it on

Windows, Macintosh and Linux. ⬚ All versions of Microsoft Office are supported. Requirements: ⬚ Windows 98, 2000 or XP ⬚ 500 Mega Hard Disk Limitations: ⬚ Windows 95 and older operating systems are not supported. Another Feature to Watch: KeyMacro continues to add more and more features. If you've used KeyMacro before, you've probably already learned what's

coming up next. If you haven't, then you're in for a real treat. One of the most exciting features for KeyMacro is scripting. Once you get used to it, you'll probably find yourself writing scripts and adding scripts to KeyMacro. It's that easy! It's really just a matter of putting a few statements together. You may have heard rumors that they're working on scripting. The good news is, it's

true. There will be documentation on how to add your own scripts to KeyMacro in the near future. With this addition, you can take your scripts and run them with KeyMacro. That means you can run scripts that allow you to automate a task that would normally be impossible to accomplish 77a5ca646e

DC-Art Millennium provides a basic combination of filters that may be used to clean up audio recordings. The 2 most useful filters are the Click & Hiss Reduction filter and the New-Click/Hiss /Surface Noise filter. Both of these filters were inspired by customers requests to DC-Art when we were developing DC-Art. The Click

& Hiss Reduction filter will remove clicks, hiss, surface noise and other disturbances. Click and hiss reduction may be applied on a file by file basis or all files in a given folder can be processed in one pass. The New-Click/Hiss/Surface Noise filter will remove clicks, hiss, surface noise, revving and other artifacts, all with a single click. The DC-Art DVD software offers the complete audio

enhancement package that any serious audiophile will want to have access to. This complete package includes the Click & Hiss Reduction Filter, New-Click/Hiss /Surface Noise Filter and much more. The DVD audio repair software also includes a wide array of audio signal processing tools which is an essential element for the complete audio restoration solution. Audio Signal

What's New in the DC-Art Millennium?

AudioManager Pro is the high-

performance multi-channel audio processing software for Windows, available as a stand-alone program or a plug-in for the most popular music applications. It is designed for recording and production applications and for professional applications for signal processing and multi-channel recording. The main advantages of this software are an easy user interface and a

powerful feature set. AudioManager Pro can perform an audio analysis of individual channels and every track of a multichannel file. It can remove noise, clicks and hum from any track of a multi-track file. Noise removal is based on smoothing and spectral filtering, while clicks can be removed by subtracting the waveforms of the individual channels. There are various

ways to combine the channels, for example by combining the channels as stereo and surround, or by creating various mixdowns. The result of every noise reduction operation can be saved as a new file, merged into the original file or, if the original was audio recording, can be used as input for automatic noise reduction using the NoiseGuru technology. The program can also perform multi-

channel recording of multi-track files and convert stereo and surround formats into various stereo and surround file formats. You can create, save and manage UIs for processing parameters. You can define various settings for different tracks, apply UIs for further editing or the creation of separate variants, and save and load these settings using the File system. The number of

output channels can be limited to 1, 2 or even more. You can also define an optional output phase curve. The program is equipped with two noise reduction technologies, a high performance proprietary algorithm and, for a wide range of files, NoiseGuru, a well-known technology. The program can also edit the frequency response of the individual channels. Features: ⍰

Multi-track file recording, editing and processing. ⍰ AudioAnalysis. ⍰ Noise reduction by smoothing and spectral filtering. ⍰ Clicks removal by subtracting the waveforms of the individual channels. ⍰ Windows Media Player compatible UIs for customizing audio settings. ⍰ Supports almost any audio format. ⍰ Algorithms for extracting audio data from
